

Justin Henry

Web Interaction and Animation

My final project was created for my own company, Doc Deuce. I chose to use the assignment as an opportunity to do something that would benefit me in more ways than one. Not only do I get the experience of utilizing what I've just learned in the course, but I also get a functional website out of it.

The animated bar chart is on the 'Overview Page'

I used a canvas and jQuery animation for the arrows at the bottom the 'Artist' page

The artist page also includes an interactive photo gallery

I used a canvas for the spinning card on the 'Intro' page

The footer contains an HTML5 audio tag

The design I created is based on my business card. To strengthen brand identity, I thought it would be useful to send people who receive my business card to a place that looks familiar.
